Subject: Transfer to Auxiliaries Multiple Employer VEBA

Beginning in the fiscal year ended June 2011, the organization has participated in the Auxiliaries Multiple Employer VEBA (Voluntary Employees' Beneficiary Association). The Auxiliaries Multiple Employer VEBA is a separate 501(c)(9) organization established in August 2010 to assist in funding post-retirement healthcare benefits for recognized auxiliaries of the California State University System.

The Foundation contributed \$1.0M to this account on an annual basis until fiscal year 2019-2020. The contributions were halted in FY19-20 due to the impact of the COVID-19 pandemic and subsequent cost-cutting measures.

Management expects to restart the payment effective this fiscal year (FY22-23), at the historic amount of \$1.0M, in an effort to reduce the interest costs associated with the Enterprises' obligation and decrease the Actuarially Accrued liability (AAL). The approved budget for FY22-23 had a VEBA contribution of \$500,000. With a current year-end forecasted surplus of \$2.5M ahead of budget, it is prudent to resume contributions at \$1.0M annually whenever feasible. Management expects to make the transfer before June 30, 2023.

Executive Summary GIC Tactical Asset Allocation

- The bear market rally that began in mid-October 2022 has continued in Q123 with the S&P 500 as of March 31 up 7% YTD, while the NASDAQ surged even more, up 16.8% YTD. While the move was due to the 45bp fall in the 10-year Treasury yield and the resultant multiple expansion, performance again became incredibly concentrated, with large mega-cap tech names disproportionately driving results. While some investors assert this positioning is appropriately defensive, the GIC disagrees, asserting that both economic and market betas of this group are higher than believed. We continue to contend that earnings risk for the S&P 500 under a soft landing and/or recession scenario is not properly priced and represents 10-20% downside to profit forecasts as volumes and pricing power simultaneously fade from unsustainable 2021-22 extremes.
- Most noteworthy about the past 90 days has been the round trip in expectations for the Fed Funds rate, which after surging to 5.5% in the beginning of March has since recoiled back towards 5% as concerns about financial stability emanating from the regional bank turmoil and SVB failure mute Fed aggressiveness. While elevated bond market volatility is understandable given the levels of uncertainty, current market expectations for ~3 rate cuts before January '24 appear to us overly sanguine given the inflation fight remains somewhat unresolved. We forecast one more hike in May and potential only 1 cut in December. Forecast for 10-year Treasury yields over next 12 months is 3.15-3.25%.
- An S&P 500 equity risk premium of ~210bps and a 3-month/10-year yield curve inversion of over 160bps (a 30-year low) suggests investors are assuming long-run costs of capital will revert to sub-2%. The GIC fundamentally disagrees. Real 10-year yields are likely to revert to pre-GFC levels in next cycle.
- The regional banking stress is completely different than the GFC of 2008, premised not on weak, packaged and opaque credits but on liquidity mismatches between the stickiness of deposits and the ability to avoid taking mark-to-market losses on held-to-maturity Treasury and MBS portfolios. Deposit betas have been weak this cycle and banks remain vulnerable to outflows as market yields in money markets, CDs and ultrashort bond funds represent good opportunities for investors. While regulators have calmed dynamics, the consequences are likely much tighter lending standards. Recession odds have tripled to over 30% probability in the next 12 months.
- Labor markets hold the key to how things develop from here. We don't think the physics of business cycles have been repealed but the pos-COVID cycle is historic for the amount of "cash on the sidelines" which may continue to cause market distortions. Financial conditions are tightening but remain much more benign than at previous market turning points.
- Broadly, our advice is to overweight cash and ultra-short fixed income, collecting positive real yields with an eye toward patience regarding the start of a new bull market. Volatility should be managed through a combination of maximum diversification and active risk management.
 - We are neutral to slightly underweight benchmark weights in US equities, with a tilt toward value and growth-at-a-reasonable price strategies. Sector tilts are somewhat defensive with preferences for energy, health care, staples, utilities, materials, financials and some consumer services. Index investors should use an equal-weighted strategy.
 - We are slightly overweight international/non-US equities with a preference for Emerging Markets given the recovery in China and our view of global currency dynamics, which ultimately support a weaker US dollar.
 - We like alternative investments in this environment and are using gold, energy infrastructure, market-neutral hedge fund strategies and private credit investments as ways to enhance returns, lower portfolio volatility and manage equity beta risk.

Explanatory Notes:

- Performance data is net of all fees and carried interest. Transaction flows and capital for these funds are included in the appropriate totals.
- Multiple, also referred to as TVPI, total value to invested capital net of the general partners and special limited partners (Capital Distributions + Capital Balance/Capital Distributions).
- Each partnership's net IRR (Internal Rate of Return) should be evaluated in light of information on such partnership's investment program, the risks associated therewith, and partnership performance as disclosed in the respective Offering Memorandum and Annual and Quarterly Reports. Return information calculated on a dollar-weighted (e.g., internal rate of return), since inception basis, which is standard for the private capital industry, rather than the time-weighted (e.g., annual or other period rate of return) basis. Comparison of returns calculated on a net IRR basis with returns on a time-weighted basis is not appropriate. There can be no assurance that unrealized investments ultimately will be realized at the valuations used in calculating net IRRs or Net Multiples or that the calculated net IRRs will be obtained. Actual realized returns will depend on, among other factors, future operating results, the value of assets and market conditions at the time of disposition, any related transaction costs and the timing and manner of sale.
- · Capital Called and Capital Distributions are since inception through the report End Date.

Fund performance is depicted net of fees. Manager and strategy performance is net of sub-advisor management fees and gross of other Commonfund Fund expenses. Past performance is not indicative of future performance.
